

CBD Full Spectrum Oil

A winterized and decarboxylated CBD extract that retains some terpenes and flavonoids.

  **50% - 80% API¹**

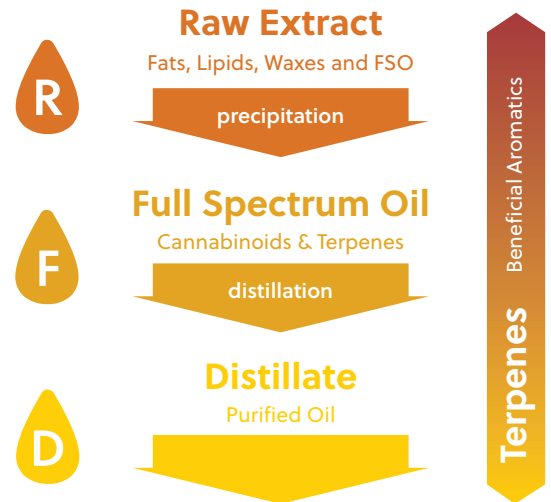

¹Management estimates actual API concentration may vary

Applications:

These supercritical CO₂ Full Spectrum Oils can be purchased for Gel Caps, Tinctures, Topicals, and Vapes, or as feedstock for your refining operations.

 WINTERIZED  DECARBOXYLATED

Cannabinoid	% wt	mg/g
Total THC [(THCA x 0.877) + D9-THC]	3.248	32.48
Total CBD [(CBDA x 0.877) + CBD]	65.687	646.871
CBD	63.39	633.902
D9-THC	3.248	32.48
CBG	2.208	22.08
CBC	2.79	17.896
CBDA	1.479	14.788
CBN	BLQ	BLQ
THCA-A	ND	ND
D8-THC	ND	ND
THCV	ND	ND
CBGA	ND	ND
CBDV	ND	ND
Terpenes	% wt	
alpha-Bisabolol	0.888	
Farnesene*	0.38	
Guaiol	0.37	

Abbreviations: wt% = percentage of weight, ND = None Detected, BLQ = Below Limit of Quantification, LOQ = Limit of Quantification, * = Mixture of Isomers

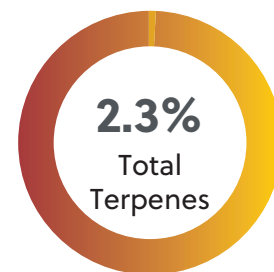

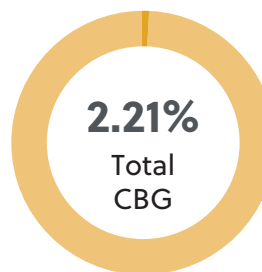

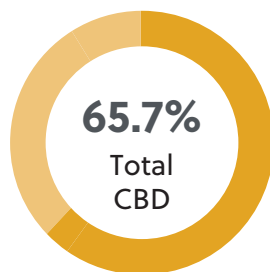

Supercritical CO₂ Extraction

Tap into Endless Sky's supercharged THAR processing capacity for cost effective biomass processing and crude oil extraction.

CBD Full Spectrum Oil from Endless Sky is produced to the highest standards for ingestion and inhalation. It is high-potency and free from contaminants. Our Full Spectrum Oils can be custom refined and blended to meet any of your needs.

For brands looking to purchase large volumes of oil products delivered to consistent specs, we will take custom orders for raw THCA/CBDA extract, winterized and decarbed full-spectrum oils, or refined and blended distillates.

We've filled the tank, just tell us where you want to go.

160,000 KG annual capacity

Fully licenced facility
standard processing licence

CO₂ capture process

Built to GPP & EU GMP standards

Product purity preservation

Automated full-flow system to vastly
reduce human contact with the product

Automated continuous
batch flow

Operational redundancies to ensure
consistent production output

To request a full COA
or discuss an order-to-spec
